

Segmentation de client et recommandation de films

Présenté par Rebecca Leygonie et Nemanja Kostadinovic

Analyse exploratoire

Données clients

CustomerID	Gender	Age	Annual Income (k\$)	Spending Score (1-100)
1	Male	19	15	39
2	Male	21	15	81
3	Female	20	16	6
4	Female	23	16	77
5	Female	31	17	40
6	Female	22	17	76
7	Female	35	18	6
8	Female	23	18	94
9	Male	64	19	3
10	Female	30	19	72

Segmentation et classification de clients

Objectif :

- Repartir les clients dans différents groupes partageant des caractéristiques communes
-> comparaison entre *Kmeans* et *Bisecting Kmeans* pour k variant de 2 à 10
- Attribuer un groupe trouvé par le clustering à un nouveau client
-> comparaison entre *RandomForest* et *Decision Tree*

Clustering par *Kmeans* avec k=5 et silhouette = 0.62

RandomForest sur les données test, accuracy = 1.0

Recommandation de films pour les clients du centre commercial

- Jointure des données d'avis et de description des films
- Recommandation basée sur l'historique d'avis du client et des autres utilisateurs
- Application d'un modèle de filtrage collaboratif : ALS

Recommandation de films pour l'utilisateur 3
